Poster Marking Rubric

COMP3740 (6u, 1 semester)
COMP3770 (6u+6u, 2 consecutive semesters)
COMP4550 (12u+12u, 2 consecutive semesters)
COMP8800 (12u+12u, 2 consecutive semesters)

Posters (worth 10%) are marked by the following rubric. The rubric is intended to award marks based on how the project is communicated to an interested but non-technical audience, not on the project's technical difficulty, accuracy or quality. These facets are assessed by the written and /or artefact components.

Critical Marking Rule:

A poster that cannot be understood by a general computing audience should not receive a mark above Distinction (79%).

Quick Marking Questions:

- Do I understand what the project is?

- Do I understand what was done?

- Do I understand the results?

- Is it easy to read?

Grade	Motivation & Big Picture (25%)	Approach (at the right level) (25%)	Results & Takeaways (30%)	Visual Communication & Layout (20%)
HD (80–100)	Problem, context, and significance are immediately clear. A non-expert can quickly understand why the work matters.	Approach is clearly explained at an appropriate level, supported by visuals or examples. Minimal unexplained jargon.	Key results are clearly presented, easy to interpret, and supported by a strong, explicit takeaway.	Clean, professional layout. Easy to scan. Effective visuals with minimal clutter.
D (70–79)	Problem and context are clear, but motivation or significance could be more explicit or concise.	Approach is mostly clear but includes minor unnecessary detail or some jargon.	Results are present and understandable, but interpretation or takeaway could be clearer.	Generally clear layout, though slightly cluttered or inconsistent in places.
C (60–69)	Problem is identifiable but context or importance is only partially explained. Requires some effort to understand.	Approach is described but is either too vague or too technical for a general audience.	Results are included but difficult to interpret or lack a clear takeaway.	Readable but cluttered or text-heavy. Organisation could be improved.
P (50–59)	Basic topic is apparent, but motivation and context are weak or unclear.	Approach is minimally described, with significant gaps or reliance on unexplained technical detail.	Results are present but unclear, poorly explained, or disconnected from project goals.	Layout is difficult to follow, with significant clutter or readability issues.
F (<50)	Problem, context, or purpose is missing or cannot be understood.	Approach is missing or not explained meaningfully.	Results are missing or not interpretable. No meaningful takeaway.	Layout is very poor. Poster is difficult or impossible to read.
